expert knowledge

Training Content

Our course are developed in-house by our team of highly experience GIS professionals. The contents of each course is carefully crafted to provide a rounded, comprehensive approach to understanding the software and ensuring that it can be used effectively in a variety of application areas.

Each course is targeted at a particular standard of user (from Beginner to Advanced) giving the opportunity for users to follow an entire programme of training to build their expertise and hands-on skills.

ArcGIS * ArcGIS Pro * MapInfo Pro * QGIS * Bespoke
Beginner * Intermediate * Mastering * Advanced * Part I * Part II * Specialist

supporting you & your users

Learning Management System

With a GIS247 e-learning licence you have access to all courses for your chosen GIS software (or software combination).

You can manage who gets access to the training from your organisation by being able to set up and manage your own user accounts. Each account is supported by our Learning Management System (LMS) which keeps track of individual user progress.

Technical support is included in our service. This means that if any user has any questions or would like help setting things up, we are available to assist. This can be by phone or email. We're also happy to advise on individual course requirements and specific topics.

GIS247

- Comprehensive training at a significant cost saving

- A resource that you can access at any time

- Training that can be repeated as often as needed to consolidate learning

- Download data and complete exercises as many times as you wish

- Flexibility to train on different software versions

- Opportunity for follow on training (to further up-skill) at no extra cost

- Train at own pace to ensure learning is positive and enjoyable

- Courses are more detailed and thorough as there no time constraint

- Constant source of on-line support

Course Details

Courses are comprised of instructional videos and hands-on exercises. Each presentation shows the software in action, together with graphics and annotation. The instructors voice over is supplemented with closed captions (CC). Closed Captions are incredibly useful to help new users become familiar with technical terms and also where English is not the first language.

Presentations can be paused, rewound and fast forwarded. Users tend to re-watch the video's multiple times, which is great to consolidate.

Each course is accompanied with a set of data which each user can download and install on their computer

Each course has multiple exercises which can be downloaded and printed. Subsequently each exercise can be completed at the users own pace, without the pressure of a class environment.

Each exercise provides clear step by step instructions for different tasks, supplemented with screen shots and images. Users tend to repeat exercises multiple times to consolidate their learning and hands on skills.

Guidance is provided at GIS247 about course timings – exercise estimates and video duration, so that users can plan their learning.

We tend to advise that little and often is best. This gives time for things to 'sink in' and also gives the flexibility for learning to fit into other work requirements.

quality training content

Accreditation

All our course are accredited by the Association for Geographic Information (AGI), GIS Certification Institute (GISCI) and the Royal Geographical Society (RGS). This certification provides CPD points toward their professional status awards.

measured success & achievement

Training Assessment

In order to measure the success of our e-learning we offer an on-line assessment with awarded certificate. Once each course has been completed a user can complete the assessment. This requires the answers from the course exercises to be submitted.

A score of > 70% achieves a pass.

Each pass is awarded a certificate as proof of newly developed skills and knowledge. This marked assessment approach provides value to the achievement of each individual and has proven to be an extremely popular part of our service.

flexibility & value

Licence Information
Access to our training is via a licence.
3 types are available for any software combination.
Each licence provides 12 months of unlimited access to the entire range of training courses for your chosen software or software combination.
Just choose the licence that caters for the number of user that require training. Whether it is for 1 person, a small group or an entire organisation, we have the solution.

Set User
A flexible solution for individuals and groups of up to 9 user. Just specific the number of set accounts you would like training access for.

Ultimate
For organisations with ≥ 10 user who require training. This licence gives total flexibility with a totally unlimited number of accounts for users from your organisation – giving the opportunity to train as many as you wish.
An Ultimate Global licence is also available to accommodate global organisations who wish for unlimited user accounts and flexibility worldwide.

Charity/Academic
A great value solution for academic institutions and charities which allows up to 60 user accounts.

Courses and More
A GIS247 licence also gives access to a searchable technical library.
Users can search the technical modules to find instructional videos on how to perform specific functions. A series of educational modules (GIS Essentials) is also available which is particularly useful for new GIS users.

Face to Face & Bespoke Training
Any of our course can be delivered face to face, in a classroom environment at your office.
We also develop bespoke training for specific applications, including conversion to e-learning format and hosting at GIS247.
